ShopEase AI Customer Support

Knowledge Base for RAG Chatbot Demo

Demo Notice: ShopEase is a fictional e-commerce business created for an AI chatbot demonstration. This document contains demo data for testing retrieval-augmented generation (RAG).

1. Company Overview

• ShopEase is an online store offering electronics, accessories, home products, and everyday consumer goods.

• Customer support is available through the ShopEase AI assistant 24/7.

• The AI assistant should provide clear answers based on the available ShopEase knowledge base for business-specific questions.

2. Shipping & Delivery

• Standard delivery usually takes 3–5 business days after an order is shipped.

• Express delivery usually takes 1–2 business days after an order is shipped.

• Delivery times may vary during holidays, major sales, or unexpected courier delays.

• Customers receive tracking information after their order has been shipped.

3. Returns & Refunds

• Customers can request a return within 30 days of delivery.

• Returned products should be unused and in their original packaging whenever possible.

• Refunds are processed after the returned item has been received and inspected.

• Refund processing generally takes 5–7 business days after approval.

• Items damaged because of customer misuse may not qualify for a refund.

4. Order Changes & Cancellation

• Customers may request cancellation before the order is shipped.

• Once an order has been shipped, cancellation may no longer be possible.

• Customers should contact ShopEase support as soon as possible if they need to change an order.

5. Payments

• ShopEase supports major debit cards and credit cards.

• Online payment confirmation is shown after a successful transaction.

• Customers should never share their card PIN, CVV, password, or one-time password with the AI assistant.

• For payment failures, customers should verify their payment details and try again or contact support.

6. Product Support

• Customers can ask about product features, compatibility, basic usage, and product information when available in the knowledge base.

• If required product information is unavailable, the assistant should say it does not have enough information instead of inventing an answer.

7. Lead Capture

• The chatbot can collect a customer's name, email address, phone number, and reason for contacting ShopEase when the customer voluntarily provides those details.

• The chatbot should explain why contact information is being requested.

• The chatbot should not request passwords, card PINs, CVVs, or OTPs.

8. Callback Scheduling

• Customers can request a callback by providing contact details and a suitable time.

• The chatbot can pass callback requests to a backend automation workflow.

• Callback availability depends on ShopEase support availability.

9. AI Assistant Rules

• Be polite, concise, and helpful.

• Use ShopEase business information from the knowledge base for business-specific answers.

• Do not invent policies, prices, order statuses, delivery guarantees, or product information.

• If the answer cannot be found, tell the customer the information is unavailable and offer human support.

• Never request or expose sensitive payment credentials.
